

Objective

Build a secure web and mobile platform that allows people to create, join, and manage communities.

Accounts

User registration with email, password, and email verification. Simple profiles using a first name or nickname.

Communities

Users can create communities, search for communities, join communities, and leave communities.

Roles

Platform administrator, community leader, and community member.

Messaging

Private messaging between members with block and report features.

Events

Community leaders can publish events, meetings, and announcements.

Subscription

The system should be designed to support a Premium subscription in the future.

Moderation

User reporting, content removal, account suspension, and activity logs.

Notifications

Notifications for new messages, invitations, and community events.

Security

HTTPS, encrypted passwords, protection against common attacks, and regular backups.

Admin Dashboard

Manage users, communities, reports, subscriptions, and platform statistics.

Technology

Responsive web application, scalable API, and secure database.
